MVP Defense Report 10-12

Purpose of the MVP Defense

The MVP defense aims to **evaluate the current progress of the project** and to **review the first implemented areas**.
It serves as a checkpoint to validate the technical direction and identify priorities for the next development phase.

Defense Feedback

Mobile

During the defense, it became clear that the **mobile application is lagging behind** compared to other parts of the project.
This gap must be addressed quickly to ensure feature parity and overall consistency.

Web

The web application is in a **generally good state**, but several important improvements are required:

- API calls are currently **hardcoded**, which is not sustainable
- A **backend endpoint** must be implemented so the web client can retrieve:
    - All available areas
    - The full set of required metadata for each area

Additionally, the **user interface needs significant improvement**.
The current simple page is not sufficient and does not reflect the expected quality of the project.

Overall Assessment

Overall, the MVP is **acceptable**, but it clearly highlights areas that require immediate improvement.
The feedback emphasizes the need to:

- Catch up on mobile development
- Improve backend–frontend communication
- Enhance the UI/UX quality

The team understands that this is only a starting point and that we must **not rely on our current progress**.

Conclusion & Next Steps

The defense was constructive and provided clear guidance for the next phase.
 The team remains **motivated and focused**, ready to move forward and **work intensively** to strengthen the project and deliver a solid, polished product.
